PGR111, solutions week 01

Task 4 - SQL basics

Write SQL queries that executes the following:

1. Retrieves all data from the **`city`** table.
```
SELECT *
FROM City;
```

2. Filters out all data for Norway (`CountryCode = 'NOR'`) in the **`city`** table.
```
SELECT *
FROM City
WHERE CountryCode = 'NOR';
```

3. Filters out city names and population (`Name, Population`) of cities in Norway in the **`city`** table.
```
SELECT Name, Population
FROM City
WHERE CountryCode = 'NOR';
```

4. Counts how many countries that are in the database.
```
SELECT count(*)
FROM Country;
```

5. Sum the total population registered in the **`world`** database and calls the sum column for `WorldPopulation`.
```
SELECT SUM(Population) as WorldPopulation
FROM Country;
```

6. Summerer hva totalt folketall i `Asia` er.
```
SELECT sum(Population)
FROM Country
WHERE Continent = 'Asia';
```

7. Retrieve an ascending list over all countries and their total area, ordered by area.
(Try to figure out (by yourself) which columns and table are needed.)
```
SELECT Name, SurfaceArea
FROM Country
ORDER BY SurfaceArea asc;
```

8. Makes a ranked list of countries by decreasing life expectancy and increasing population.
```
SELECT Name, Population, LifeExpectancy
FROM Country
ORDER BY LifeExpectancy desc, Population asc;
```
