TEK306- Assignment 2 – Solution (Sanfoundry)

1. _____ gets propagated through networks and technologies like SMS, Bluetooth, wireless medium, USBs and infrared to affect mobile phones.
a) Worms
b) Antivirus
c) Malware
d) Multimedia files
Answer: c
Explanation: Malware gets propagated through networks and technologies like SMS, Bluetooth, wireless medium, USBs and infrared to affect mobile phones.

2. _____ is the protection of smart-phones, phablets, tablets, and other portable tech-devices, & the networks to which they connect to, from threats & bugs.
a) OS Security
b) Database security
c) Cloud security
d) Mobile security
Answer: d
Explanation: Mobile security is the protection of smart-phones, phablets, tablets, and other portable tech-devices, & the networks to which they connect to, from threats & bugs.

3. Mobile security is also known as _____
a) OS Security
b) Wireless security
c) Cloud security
d) Database security
Answer: b
Explanation: Mobile security also known as wireless security is the protection of smart-phones, phablets, tablets, and other portable tech-devices, & the networks to which they connect to, from threats & bugs.

4. DDoS in mobile systems wait for the owner of the _____ to trigger the attack.
a) worms
b) virus
c) botnets
d) programs
Answer: c
Explanation: Botnets on compromised mobile devices wait for instructions from their owner. After getting the owner's instruction it launches DDoS flood attack. This result in a failure in connecting calls or transmitting data.

5. Hackers cannot do which of the following after compromising your phone?
a) Steal your information
b) Rob your e-money
c) Shoulder surfing
d) Spying
Answer: c
Explanation: Shoulder surfing is done before compromising the mobile. So, hackers can steal your information; rob your e-money or do spying after compromising your smart-phone.

6. Which of the following is not an appropriate way of targeting a mobile phone for hacking?
a) Target mobile hardware vulnerabilities
b) Target apps' vulnerabilities
c) Setup Keyloggers and spyware in smart-phones
d) Snatch the phone
Answer: d
Explanation: Snatching is not a type of hacking any smart-phone. Targeting the hardware and application level vulnerabilities and setting some keylogger or spyware in the target mobile can help get valuable info about the victim.

7. Mobile Phone OS contains open APIs that may be _____ attack.
a) useful for
b) vulnerable to
c) easy to
d) meant for
Answer: b
Explanation: Mobile phone operating systems contain open APIs that or may be vulnerable to different attacks. OS has a number of connectivity mechanisms through which attackers can spread malware.

8. Hackers cannot do which of the following after compromising your phone?
a) Shoulder surfing
b) Accessing your voice mail
c) Steal your information
d) Use your app credentials
Answer: a
Explanation: Shoulder surfing is done before compromising the mobile. So, hackers can steal your information; accessing your voice mail or use your app credentials after compromising your smart-phone.

9. App permissions can cause trouble as some apps may secretly access your memory card or contact data.
a) True
b) False
Answer: a
Explanation: App permissions can cause trouble as some apps may secretly access your memory card or contact data. Almost all applications nowadays ask for such permission, so make sure you do a proper survey on these apps before allowing such access.

10. Activate _____ when you're required it to use, otherwise turn it off for security purpose.
a) Flash Light
b) App updates
c) Bluetooth
d) Rotation
Answer: c
Explanation: Activate Bluetooth when you're required it to use, otherwise turn it off for security purpose. This is because; there are various tools and vulnerabilities that may gain access to your smart-phone using Bluetooth.
